Please refer to the following pages for the suggested topics, instructions for submission and the other details of each calling.

Program Overview

How do countries across the globe collaborate effectively to deliver innovative pharmaceutical products, medical devices, and regenerative medical products to patients, in the fastest, most efficient way possible? With healthcare product development becoming increasingly global, the time has come to deepen the discussion on how to leverage the individual strengths of countries, promote better collaboration, and strengthen global partnerships, to build the ideal system for creating medicines, medical devices, and regenerative medical products.

Further, innovative technologies such as artificial intelligence, big data/genomics, and cell/gene therapies are poised to transform healthcare product development across the globe – join us as at the DIA Japan Annual Meeting 2018, to discuss these topics and the future of healthcare.

We look forward to welcoming you at Tokyo Big Sight from November 11- 13, 2018 for stimulating discussions around promoting better collaboration to drive global health and innovation in this era of medical and scientific transformation.
