

## DIA RIM Reference Model V2.0

### Testimonials

*"Thank you for engaging with us and sharing the DIA RIM Reference Model V2.0. The Model feels very similar to our own, as we also based our Product Information offering on the ISO IDMP model. It also spans a broader set of business boundaries than our current RIM offering. It has been beneficial in supporting greater global alignment, prompting us to adjust vocabulary and naming conventions in our Product Information offering to better suit the North American market. This has been insightful as we continue the vocabulary work, we've advanced over the past decade to align North American and European naming conventions, building on our strong European foundation. We appreciate your consideration of our products and encouraging RIM consistency across our ecosystem."*

- Lorenz Product Development Team

*"The RIM Reference Model stands out as a practical blueprint for bringing structure and long-term sustainability to regulatory information management. It creates architectural discipline across functional areas and processes without constraining organizational flexibility and offers a stable backbone that companies can adapt to their own operating models while still maintaining coherence and traceability. In a fragmented regulatory landscape, this model drives clarity, smarter systems, stronger governance, and confidence in future decision-making."*
