In today's world, where regulators, payers and the global biopharmaceutical industry is working relentlessly towards smarter and smaller trials, pre-clinical, clinical and real-world considerations must combine for formulating compelling early development strategies. With the advent of translational research, leveraging promising laboratory and pre-clinical findings to design an effective Phase I approach including first in humans, proof-of-concept and other preliminary efficacy studies, will yield outcomes for promising drug candidates to reach the market faster and more effectively.

Objective

With this program, DIA India aims to provide a dynamic and comprehensive overview of the journey from bench to bedside, drug design with DMPK, artificial intelligence in preclinical development, implementing effective Phase I strategies, starting stronger at proof of concept and leveraging Phase IIa data to plan for a smarter and faster Phase III trial.
