

WHAT CAN YOU LEARN AT DIA'S DTCT CONFERENCE?

Co-sponsored with Critical Path Institute's ePRO Consortium

What applications of digital technologies:

- Improve patient experience?
- Improve trial design?
- Facilitate the conduct and operation of clinical trials?
- Ensure that trial endpoints are clinically meaningful and represent improved patient outcomes?
- Facilitate the collection and use of quality data for clinical study and regulatory decision-making?

What nuances and relationships exist between policy, legal, scientific, and regulatory concerns, related to digital technology in clinical settings?

How are roles, skills, and qualifications of medical product professionals changing in the application and use of new technologies in clinical trials?

How should organizations ensure adequate cybersecurity and data privacy measures?

What interoperability challenges remain and what solutions exist to overcome siloed infrastructure?

GET ANSWERS IN MARCH!
